Hotel Guest Room Management System

TNDE - Business model

Our System offers

- Energy Saving and Management
- Full Guest Room Control
- Lighting and HVAC Control
- Integrated Room Solutions
- Wide Range of Functionalities

Advantages of Our System

ENERGY SAVING

We provide better energy consumption management that enables major savings in energy thus financial resources by reducing one of the largest operational costs in hotels.

PROGRAMMABILITY

We offer solutions for your needs giving you the possibility to program your perfect room setting in a small simple hotel or a grand luxurious one.

COMFORT

We bring the highest level of comfort to your guests with intuitive panels enabling easy access and control.

DESIGN

We make it possible for you to design your future glass panels by choosing different colors and pictograms to fit into your hotel interior design.

SAFETY

We secure the feeling of safety for both, your guests and hotel staff by applying high level access control and monitoring 24/7.

INTEGRATION

We enable easy integration with other systems HVAC, PMS, DOOR LOCKS etc, via BACnet or Modbus protocols TCP/IP and Bluetooth.

Typical Guestroom

Guest Room Panel Distribution

Intelligent user interfaces

Combining frontal glass panel with variable add-ons provides the possibility of a great number of different devices

devices

TNDE System

On/Off Lighting Control

All relays of the RCU are rated at 10A for resistive loads and 2A inductive loads

Thermoregulation

Fan Coil Unit

Control of floor heating, fan coil units, heaters, etc.

Actuator Valves

Control of on/off, floating and modulating valve actuators.

Curtain/Sheer control

Multiple control options from 1 to 3 buttons with features like one-touch and hold/ release.

Primary Field Devices

Sensors & Switches

Door/Window Contacts, Pulse Switches, Motion Sensors

Operator Console and Central Monitoring Platform

RMS Server

- Applications, Interface with PMS and other 3rd parties
- jPLCPro

Hotel Converged Network with RMS VLAN

TCP/IP Communication ensures reduced latency times

Card Encoder

RS 485 (Modbus)

Expansion Modules

Expansion Modules

System is scalable and modular to meet various requirements. Lighting Control capabilities include switching and dimming halogen and incandescent lights, LEDs, and Fluorescents. Supported dimming technologies include 0-10Vdc, leading edge dimming and trailing edge dimming. Supported Lighting protocols include DALI.

Network infrastructure

System Overview – Online Network

RMS Server Room & Operator Control Centre

Client for Frontdesk, Housekeeping,
Engineering, Security, Management

- Saving on the Power Infrastructure
- Separate VLAN for RMS

Programmable Glass Panels

Corridor Status Panel

- Supports Mifare 1K RFID card
- Additional functionality provided by pushbutton and LED indicators
- Configuration, programming and debugging is done using PC based tool through USB port
- Resource sharing between controllers through BACnet network. Sharing of the data is performed without intervention of the supervisory system
- Jumper selectable standard polarizing and termination resistors on RS485 terminal

Card Holder

- Supports Mifare 1K RFID cards
- Card gap has backlight
- Configuration, programming and debugging is done using PC based tool through USB port
- Resource sharing between controllers through BACnet network. Sharing of the data is performed without intervention of the supervisory system
- Jumper selectable standard polarizing and termination resistors on RS485 terminal

Wall touch panels

- 9 or 12 capacitive keys with bicolor backlight
- Configuration, programming and debugging is done using PC based tool through USB port
- Resource sharing between controllers through BACnet network. Sharing of the data is performed without intervention of the supervisory system
- Jumper selectable standard polarizing and termination resistors on RS485 terminal

Room display unit

- Color display
- 10 capacitive keys with bicolor backlight
- Embedded temperature probe
- High level of flexibility thanks to a wide range of IO resources
- Configuration, programming and debugging is done using PC based tool through USB port
- Resource sharing between controllers through BACnet network. Sharing of the data is performed without intervention of the supervisory system
- Jumper selectable standard polarizing and termination resistors on RS485 terminal

A modern, minimalist bedroom interior. The room features a large bed with white linens and a patterned throw blanket. A large, abstract painting hangs on the wall above the bed. Two bedside tables with lamps are positioned on either side of the bed. A blue armchair is visible in the foreground. The room has a high ceiling with recessed lighting and large windows with blue and white curtains. The floor is made of light-colored wood.

Usability and
Guest
Experience as
our core design
principles

Design Capabilities

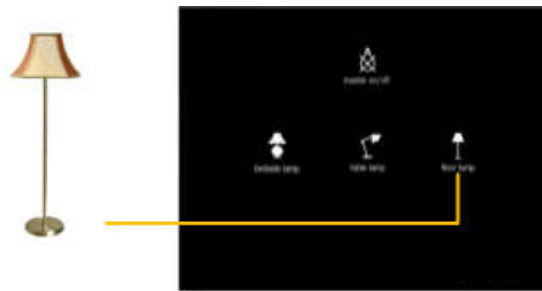

User interface

Focus on User-friendly
Developed for hospitality environment
Icons allow quick and easy familiarisation
Text, fonts and icons are customisable

Look and Feel

Devices can be customized to match the interior design
Ability to incorporate logo or pattern prints
Panel devices with elegant look and pleasing light.

Mix of icons and text
Backlight icons for easy use at night
Multi-color status LED
Multi use panels, lighting, Air Con, Guest Services

Multilingual text labels make sure the system is being understood on international level

Icons that match the real-world FF&E help the user to understand immediately what he is controlling

Constantly growing

Option to create brand specific icon sets

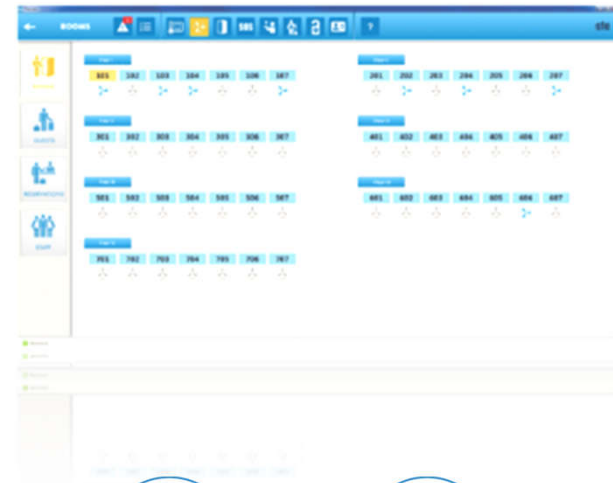

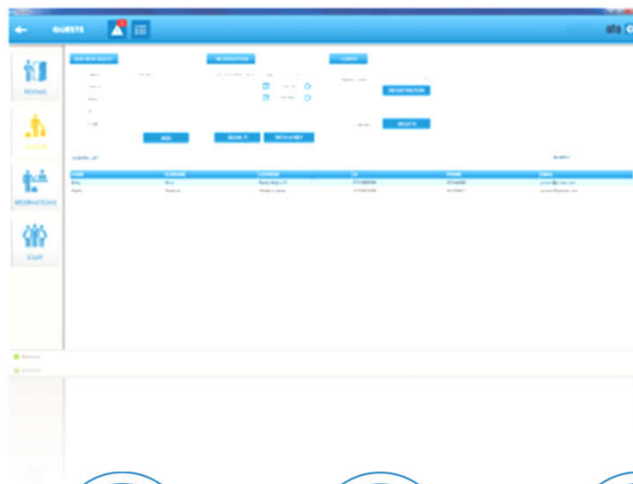

Manage your hotel
better with
TNDE-Ata

What is TNDE-Ata?

TNDE-Ata is a Room management system (RMS) application which incorporates room monitoring and control. TNDE-Ata represents a scalable and modular system which provides real-time monitoring of numerous events such as door state, room fan speed, presence in the room and temperature measurements.

Why Use TNDE-Ata?

YOUR HOSPITALITY PARTNER

ENERGY EFFICIENCY

GUEST COMFORT

MODERN DESIGN

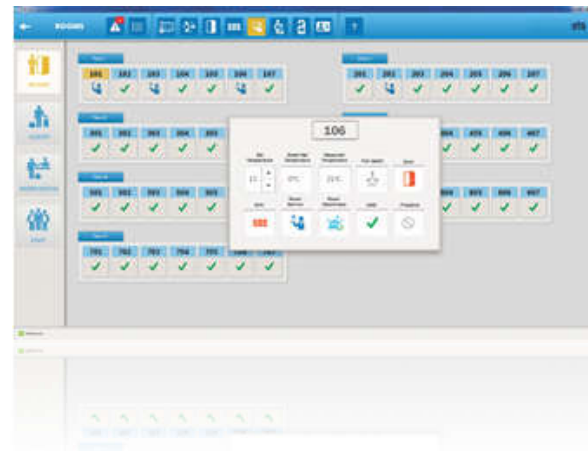

INTUITIVE

MODULAR

TNDE-Ata has numerous features:

- Monitors the status of the room (DND, MUR, SOS)
- Supports seasonal programming of temperature settings
- Supports encoding keycards for guests and staff
- Possesses integrated alarm system which tracks all emergencies
- System log tracks all events in the hotel
- Provides staff management module

T&D
ENGINEERING

Room Controls – Access Control

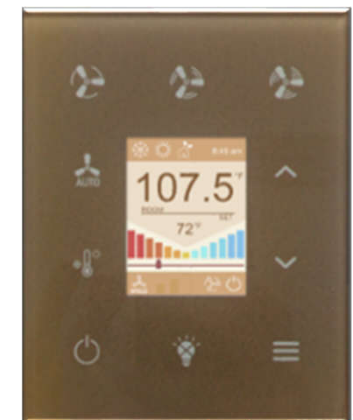

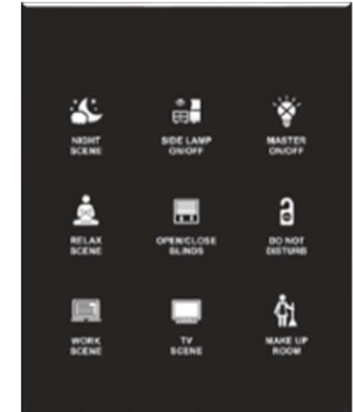

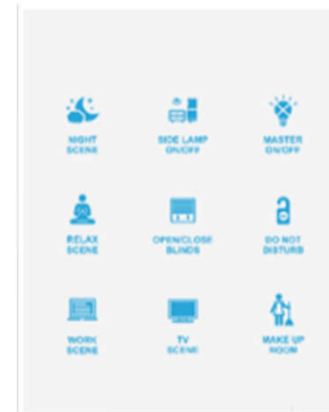

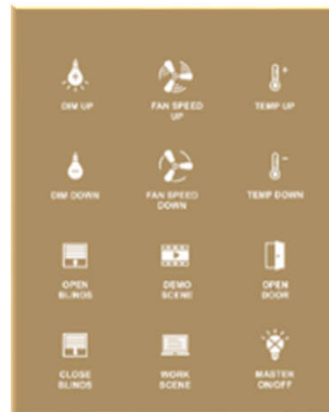

- Access control uses RFID cards with unique ID code. There are three types of cards:
 - **Guests**
 - **Maintenance**
 - **Admin**
- Each usage of the card is registered and sent to monitoring computer.
- Maintenance cards types can be further divided into cards for cleaning ladies, handymen, doormen, with different usage rights.
- When a card is issued its ID is sent to the room controller and saved in controller memory.
- First level of integration with Salto door lock systems.

The glass color and patterns are fully customizable allowing for a plethora of options for designers
